

Land Survey CAD Technician

Ideal candidate has had formal survey related training/education and a minimum of 2 years AutoCAD and Civil3D experience. Survey field crew experience and general knowledge of field survey procedures and equipment also preferred.

Survey CAD Technician will work with a Professional Land Surveyor to perform a variety of survey related tasks such as creating topographic maps, ALTA/NSPS surveys, boundary surveys, subdivision plats, and construction staking surveys. Survey CAD Technician is also expected to process and interpret survey data collected in the field and can read and interpret property legal descriptions, easements and right-of-way. This position is full-time.

A **Women Majority-Owned** firm since July 2021, Star Surveying has provided survey and mapping services throughout the San Juan Islands for over 30 years and has recently opened its second office in Anacortes, WA.

Applicants should send resumes to starsurveying@rockisland.com

Salary range is \$25-35/hour depending on experience

Medical Benefits with Health Savings Account available to FT employees after 90 days

Field Survey Technician

Candidates should have experience and knowledge in the maintenance of field equipment, setup, operations, and proper field procedures to ensure efficient and accurate field data collection. Candidates should be experienced in the use and application of GPS and Trimble Robotic Total Stations. Responsibilities include but are not limited to carrying equipment on job sites (various terrain and a minimum of 50 pounds) locating and setting property corners, mag nails and hubs, taking field notes including depiction sketches, and the ability to work effectively and maintain a good attitude with our field and office team.

Field Survey Technicians work under the guidance of a Party Chief and under the authority of a Professional Land Surveyor. This is a full-time position.
